

ABSTRACT OF THE DISCLOSURE

When a power of a DVD audio player is turned off, a track number relating to a track that is reproduced until the power is turned off, and a group
5 number relating to a group including the track, and a display list number corresponding to the still picture information unit that is reproduced until the power is turned off are stored in a storage unit. When the reproduction is resumed, a reproduction position corresponding to a reproduction starting time of the still picture information unit that was reproduced until the power of the
10 DVD audio player is turned off is determined on the basis of the group number, the track number and the display list number, all of which are stored in the storage unit, and this reproduction position is set as a reproducing resuming position.
